

Office SharePoint Online

In today's business climate, collaboration is essential. Microsoft Office SharePoint Online offers business a flexible, Web-based solution of tools and services to help users manage information and collaborate effectively. Based on Microsoft® Office SharePoint® Server 2007 (MOSS), the remotely hosted solution provides users the ability to easily create and manage custom team and project focused sites for collaboration and personal productivity. Users get the authority, flexibility, and customization they need to truly work efficiently across teams.

How it Works

With Office SharePoint Online, your enterprise can be up and running quickly. At the heart of the solution are Microsoft data centers located strategically worldwide. Each data center houses a highly reliable complex of equipment that hosts your collaboration solution. The servers needed to support your organization are dedicated to your company only. Your data is always kept separate from other organizations. Appropriate information from your directory is continuously synchronized to the directory in the Microsoft data centers, allowing your users to seamlessly collaborate from both inside your corporate network as well as securely over the Internet.

Core Collaboration Service

Microsoft offers a comprehensive collaboration solution with a simple per-user monthly fee. Major features include:

- Self-service SharePoint site creation with online discussion areas, shared document and meeting workspaces, document libraries with version control, and surveys.
- Out-of-the-box content management features for documents, records, and Web contents.
- Ability to search SharePoint site content across the entire organization.
- E-mail alerts when documents and information have been changed or added to a site.
- Secure Internet access using 128 bit SSL encryption and anti-virus scanning.
- Directory trust with your Microsoft Active Directory®, providing single sign-on capability.
- Scalable to thousands of sites within an organization, allowing managers to delegate site creation to others.
- Self-service document restore and data recovery.
- Dedicated servers, networks, and physical space in Microsoft data centers, providing you with logical and physical security at 99.9% uptime.
- Upgrades to the most current version of SharePoint is included at no extra charge.

Optional Services

WAN Acceleration: Microsoft can provide your company with analysis and consulting services about performance management and latency mitigation for SharePoint users in your organization. We support the use of Certeon WAN acceleration devices.

Migration: Many customers have existing collaborative platforms or older versions of SharePoint. Working with our partners, Microsoft can help you develop a strategy for migration, outline the risks, and facilitate migration activities.

Additional Storage: Expanded storage options are also available for ongoing SharePoint growth and are priced per each terabyte used.

Customization and Applications: Microsoft, along with our extensive partner ecosystem, provides a process for reviewing, approving, and operating customizations. The development work can be done by you or by a third party and will be handled as a separate consulting project.
