Windows

Improve enterprise security with

Windows Autopatch

Basic security hygiene protects against 98% of attacks.[1]

Keeping endpoints up to date is a pillar of basic security hygiene. Windows Autopatch can automate the process of applying monthly Windows quality updates and critical zero-day updates to help harden your security posture.

"By having an automated patching process, you're reducing your risk of cyberattacks. If you look at the published costs of recovery, the benefits of Autopatch really sell itself." [2]

- Gov't Sr. Cloud Engineer

68%

Effective and efficient patch management automation can also free up IT teams to do more strategic planning tasks.

62%

Imagine more time for penetration testing, backup infrastructure, and disaster recovery plans.

Unlock Windows E3 value with Windows Autopatch.

Windows Autopatch is an intelligent managed service that keeps Windows, Microsoft 365, Microsoft Edge, and Microsoft Teams current, giving you visibility and control while freeing you to focus on other priorities.
