

Vending machines with a brain

Invenda Solutions transform mechanical vending machines into smart devices that take full advantage of IoT technologies. You'll get eye-popping digital signage and interactive product displays. Smart sensors for better management and control. And business intelligence that helps you reach more people, in the right ways.

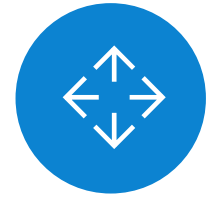

Increase sales and engagement exponentially

Eye-catching vending solutions that draw customers in and delight with custom service.

Radically reduce management and inventory costs

Smart IoT devices with up to 150 sensors that are connected to existing systems for reduced cost.

Extend vending solutions into new markets

Easily extend vending technology into a variety of other applications and verticals.

How can you use Invenda Solutions?

Now you can bring vending machines into the 21st century, extending their reach and making them more relevant to a modern audience. And some of their applications may surprise you!

➤ Traditional food/beverage

Now food and beverage operators can extend their national or global reach, tying in with existing promotions and campaigns with ease.

➤ Pharmaceutical

With authentication capabilities built in, Invenda Smart Vending is ideal for dispensing medication, whether in pharmacies or hospitals.

➤ Hospitality

Smart vending machines are a great way for hotels, motels to integrate targeted sales into their properties, increasing customer satisfaction and brand loyalty.

➤ Facilities management

Building managers can extend their services with targeted sales and communicate with tenants using digital signage—all while integrating with existing systems.
