# Problem Generation

Sumit Gulwani  
Senior Researcher  
Microsoft Research, Redmond

# Motivation

Problems similar to a given problem.

- Avoid copyright issues

- Prevent cheating in MOOCs (Unsynchronized instruction)

Problems of a given difficulty level & concept usage.

- Generate progressions

- Generate personalized workflows

# Content Classification

## Various subject domains

Arithmetic, Algebra, Logic, Programming, Language Learning, ...  
Can be classified into Procedural or Conceptual.

## Procedural

**Mathematical Procedures** (Addition, Long division, GCD/LCM, Gaussian Elimination)  
**Algorithmic Procedures** (BFS, insertion sort, regular expression -> automaton)

## Conceptual

**Proofs** (Algebraic theorems, Natural deduction, Non-regularity)  
**Constructions** (Geometric ruler/compass, Automata constructions, Algorithms)

# Comparing Progressions: Integer Comparison

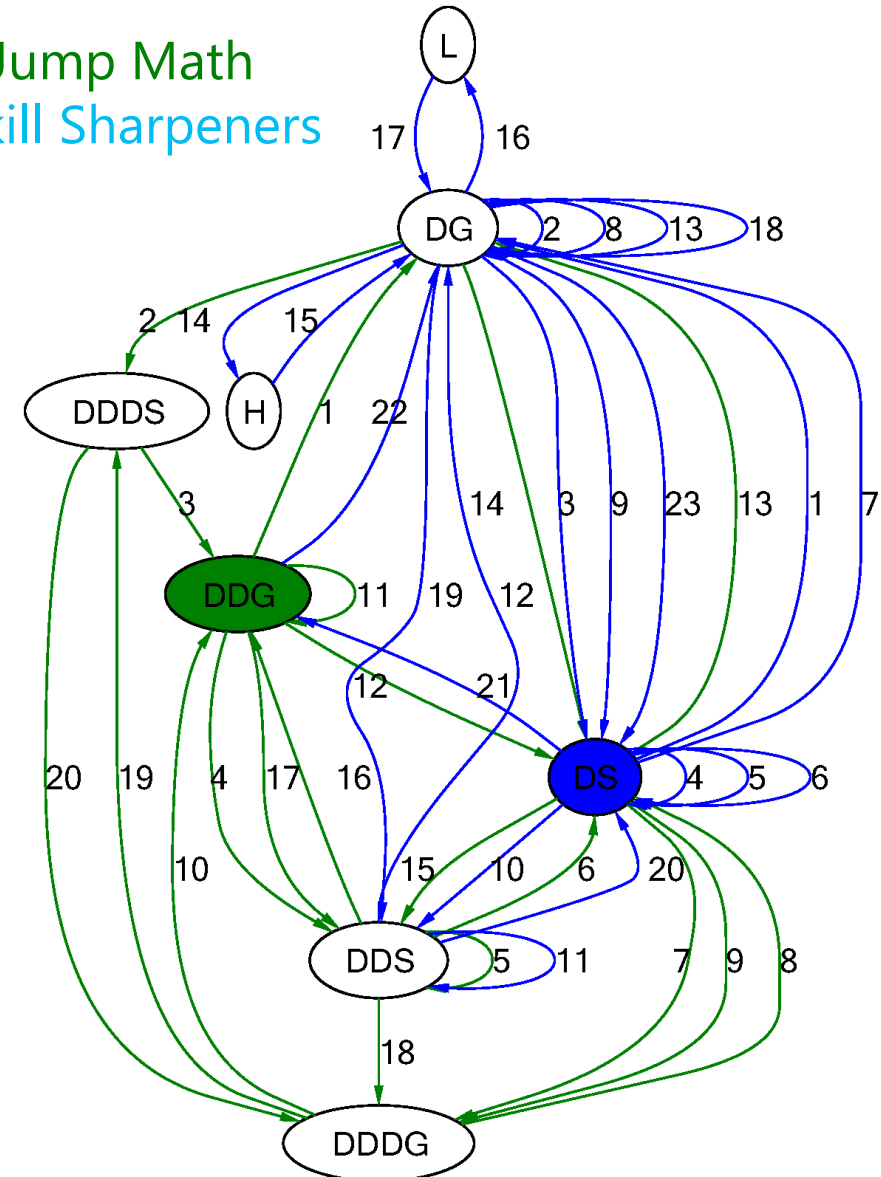

Green Progression: Jump Math

Blue Progression: Skill Sharpeners

```

1: procedure COMPARE(a, b)
2:   if len(a) > len(b) then
3:     return more
4:   else if len(a) < len(b) then
5:     return less
6:   end if
7:   for i ← 0, len(a) − 1 do
8:     if ai > bi then
9:       return more
10:    else if ai < bi then
11:      return less
12:    end if
13:  end for
14:  return equal
15: end procedure
  
```

- ▷ More digits (H)
- ▷ Fewer digits (L)
- ▷ For each digit (D)
- ▷ Digit is larger (G)
- ▷ Digit is smaller (S)
- ▷ Equal (E)

Green Progression moves (quickly) into involved problems that involve comparing more digits.

But it ignore an entire class of levels (H and L)!

$$\lim_{n \rightarrow \infty} \sum_{i=0}^n \frac{5i^2 + 3i + 3}{6^i} = 6$$

# Integration Problems

Example Problem:  $\int (\csc x) (\csc x - \cot x) dx = \csc x - \cot x$

Query:  $\int T_0(x)(T_1(x) \pm T_2(x))dx = T_4(x) \pm T_5(x), \quad T_1 \neq T_2 \wedge T_4 \neq T_5$

New problems generated:

$$\int (\tan x) (\cos x + \sec x) dx = \sec x - \cos x$$

$$\int (\sec x) (\tan x + \sec x) dx = \sec x + \cot x$$

$$\int (\cot x) (\sin x + \csc x) dx = \sin x - \csc x$$

# Determinant Problems

Example Problem: 
$$\begin{vmatrix} (x+y)^2 & zx & zy \\ zx & (y+z)^2 & xy \\ yz & xy & (z+x)^2 \end{vmatrix} = 2xyz(x+y+z)^3$$

Query:

# Sentence Completion

1. The principal characterized his pupils as \_\_\_\_\_ because they were pampered and spoiled by their indulgent parents.
2. The commentator characterized the electorate as \_\_\_\_\_ because it was unpredictable and given to constantly shifting moods.

- (a) cosseted
- (b) disingenuous
- (c) corrosive
- (d) laconic
- (e) mercurial

One of the above problems is a real SAT problem, while the other one was automatically generated!
