

Beyond Flat Displays

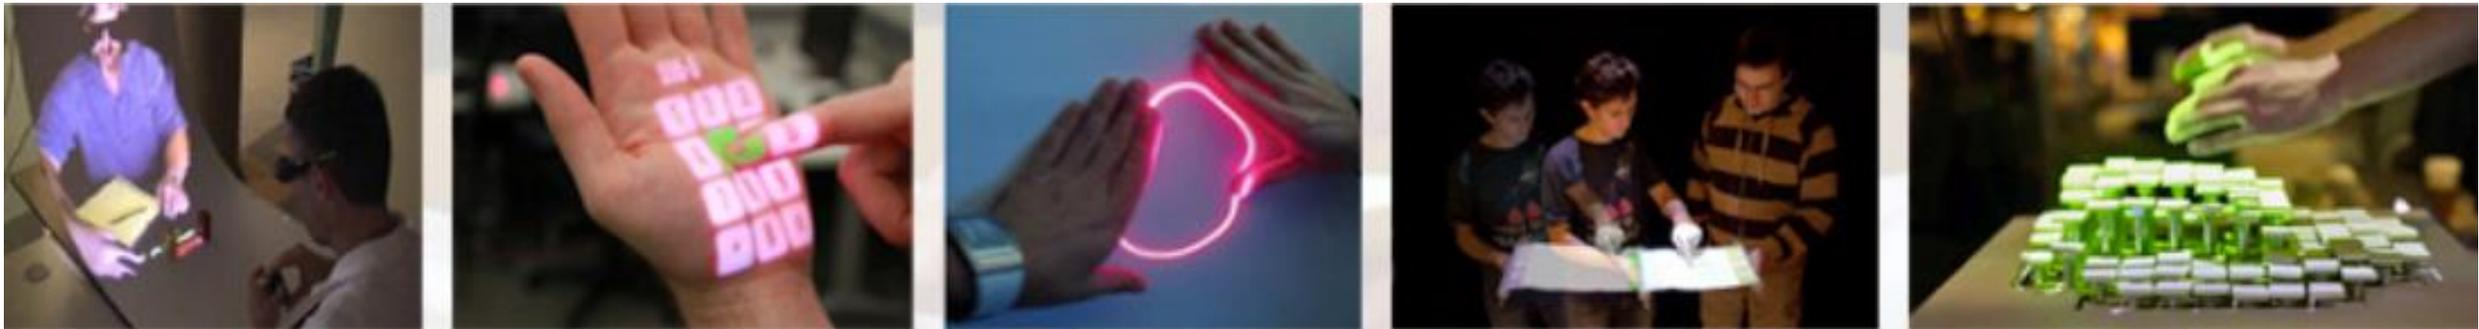

Hrvoje Benko – Microsoft Research

ACM CHI 2013 Workshop – Displays Take New Shape

April 28, 2013

Workshop goals

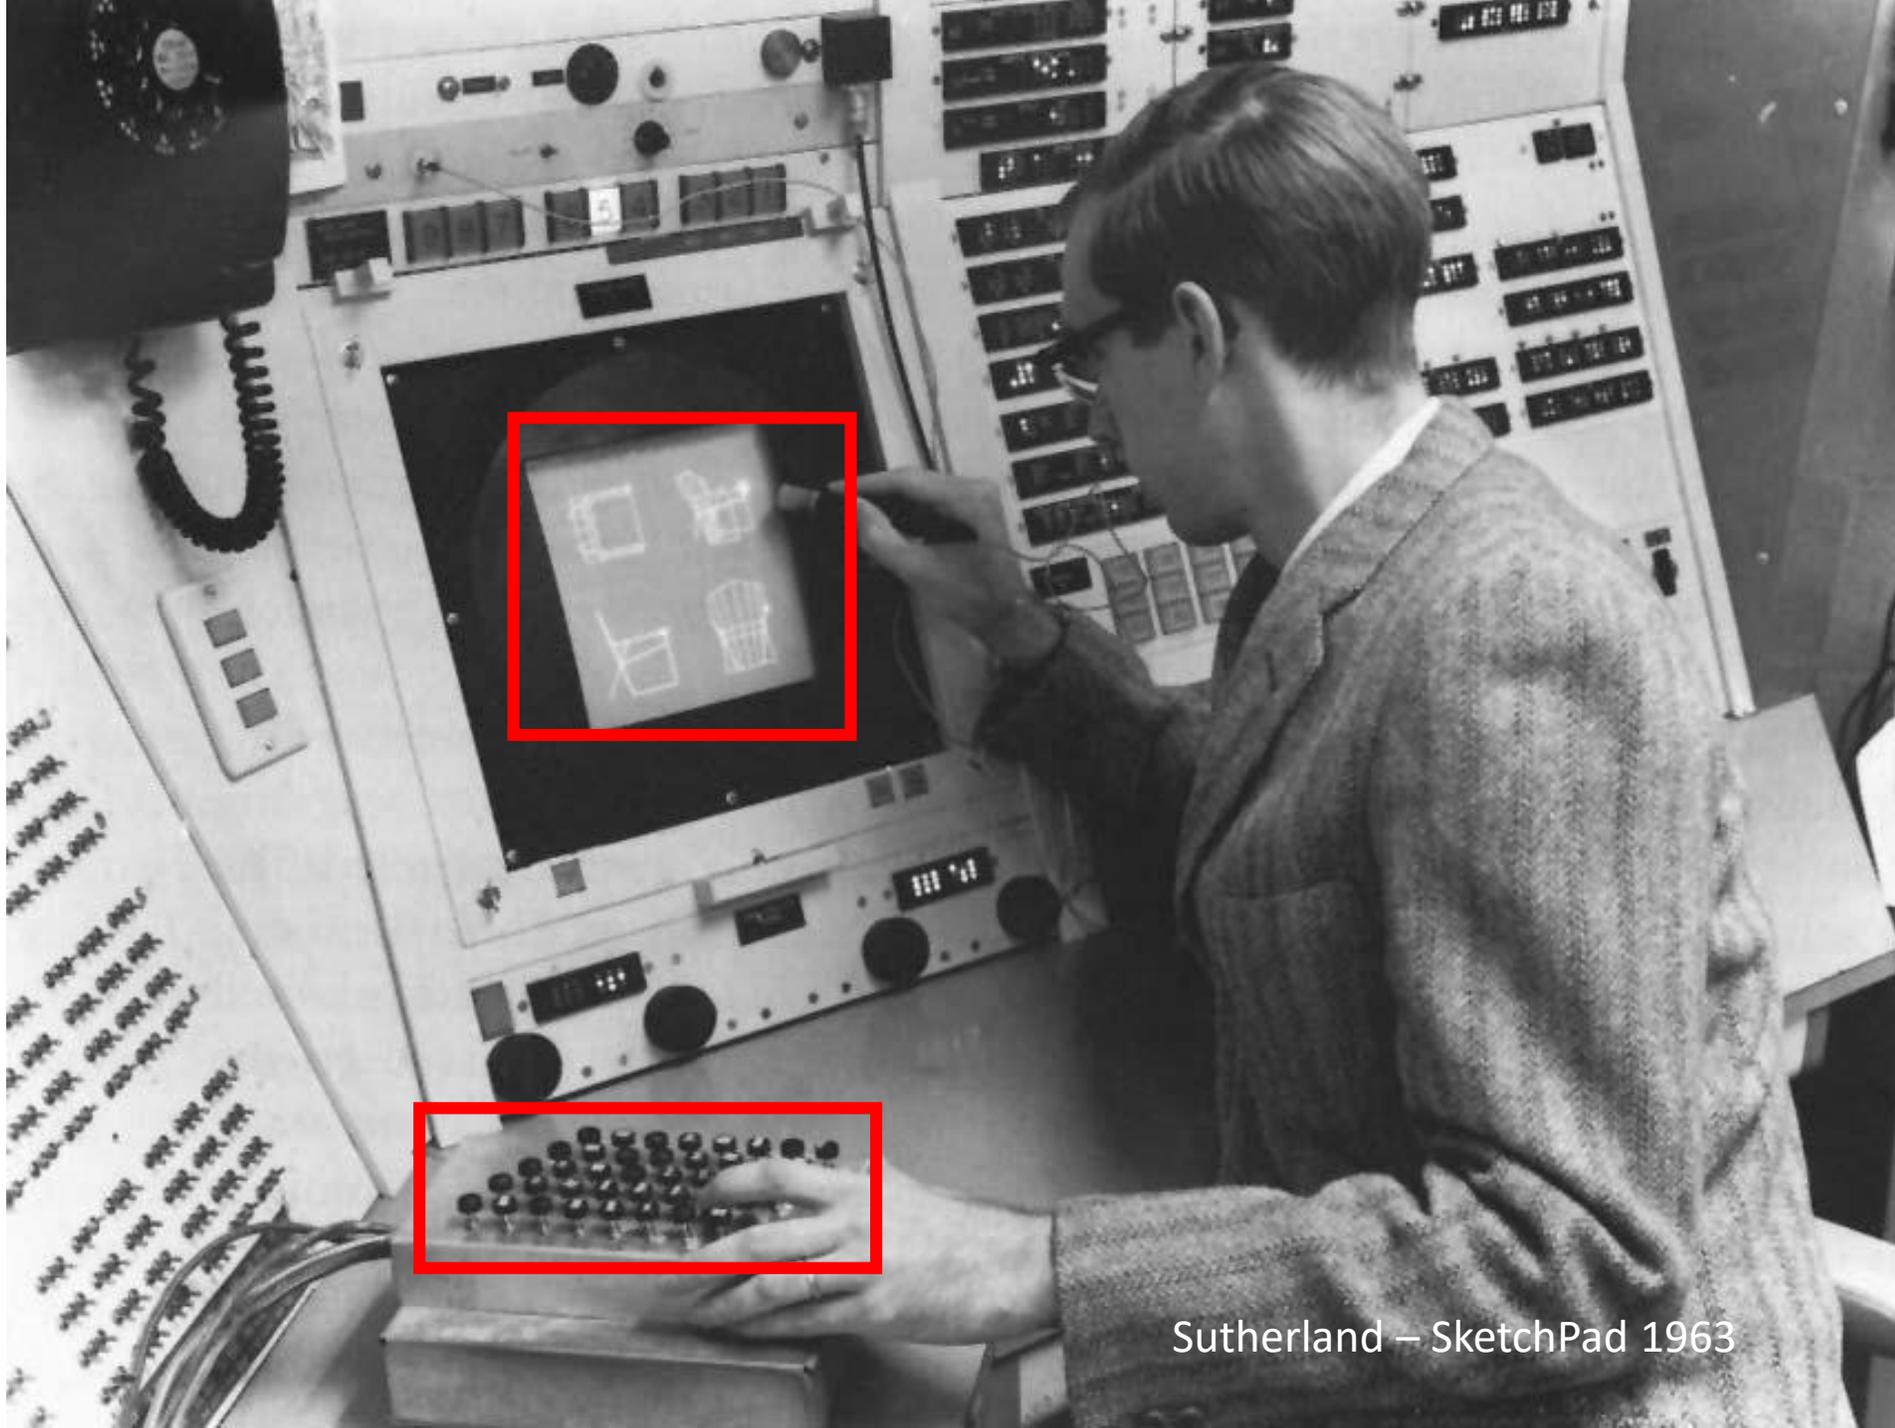

1. To explore the emerging research in alternative display types and form factors, with the goal of generating an agenda for future interactive surfaces.
2. Foster a research community interested in formed, flexible, haptically actuated, projected, non-flat displays.

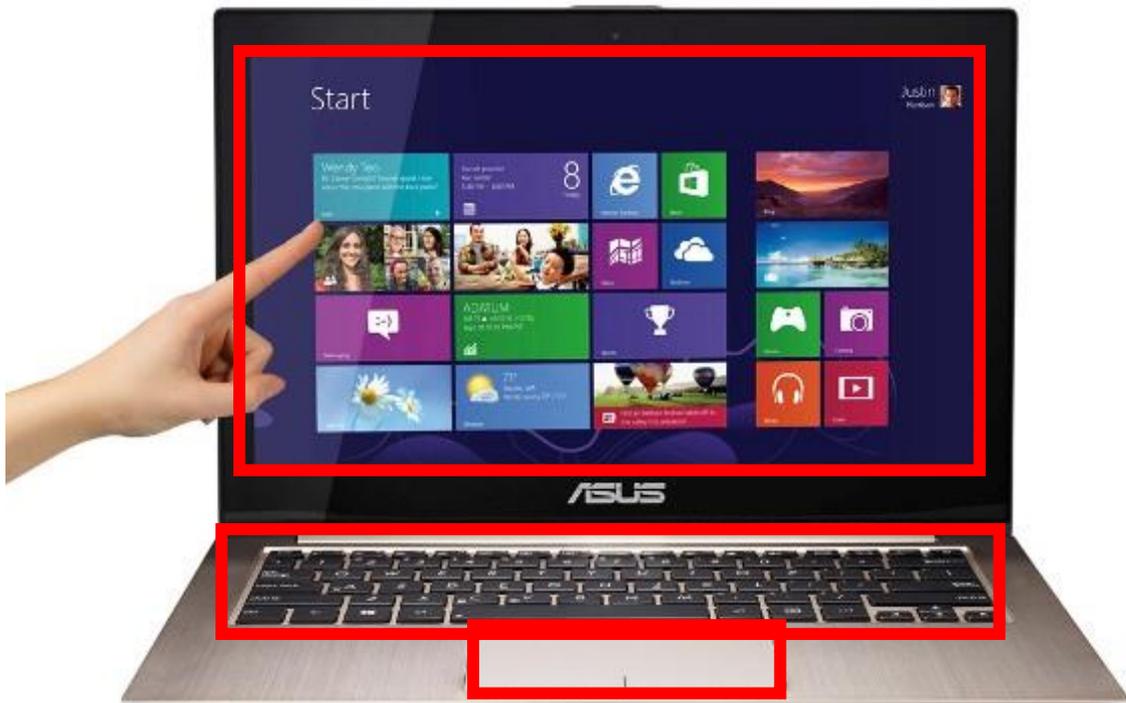

Three trends

1. Interaction needs (not computational needs) defines the form of the computing device

Sutherland – SketchPad 1963

2. Displays are becoming more diverse

Variety of displays

- Smaller, bigger
- Higher resolution
- Brighter
- Visible in sunlight
- 3D
- Interactive (touch & pen)

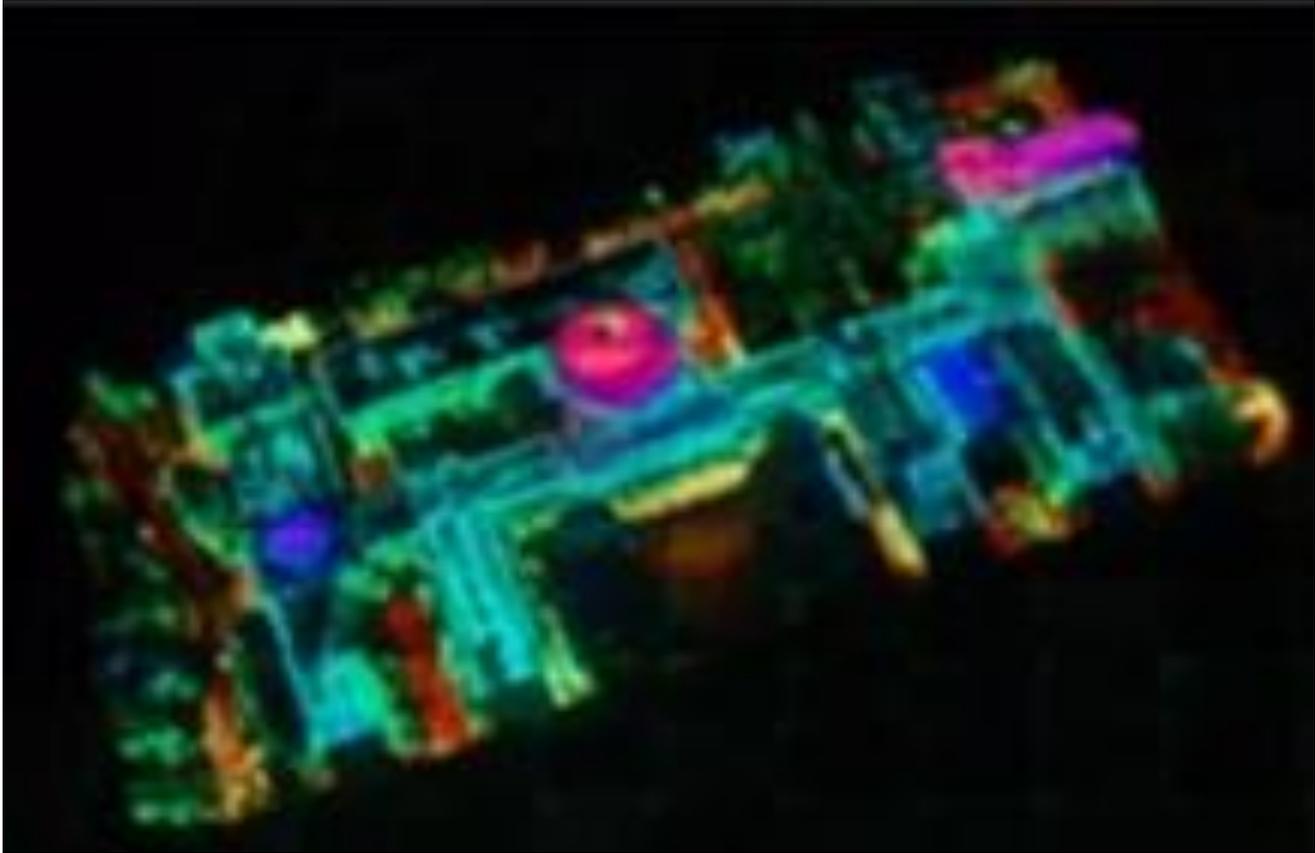

Flexible

Holographic

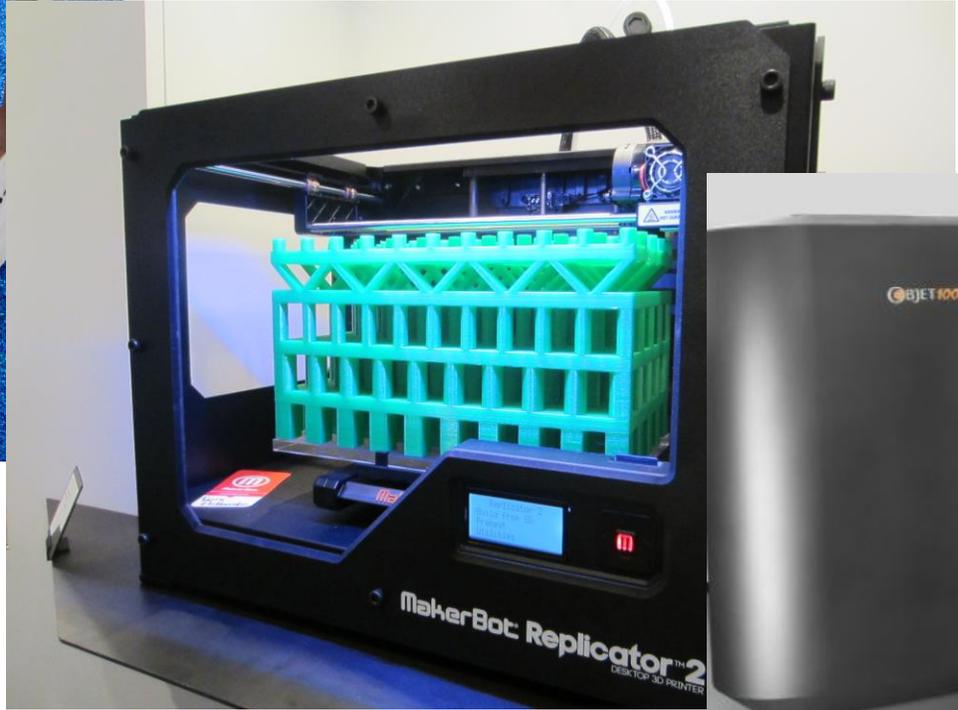

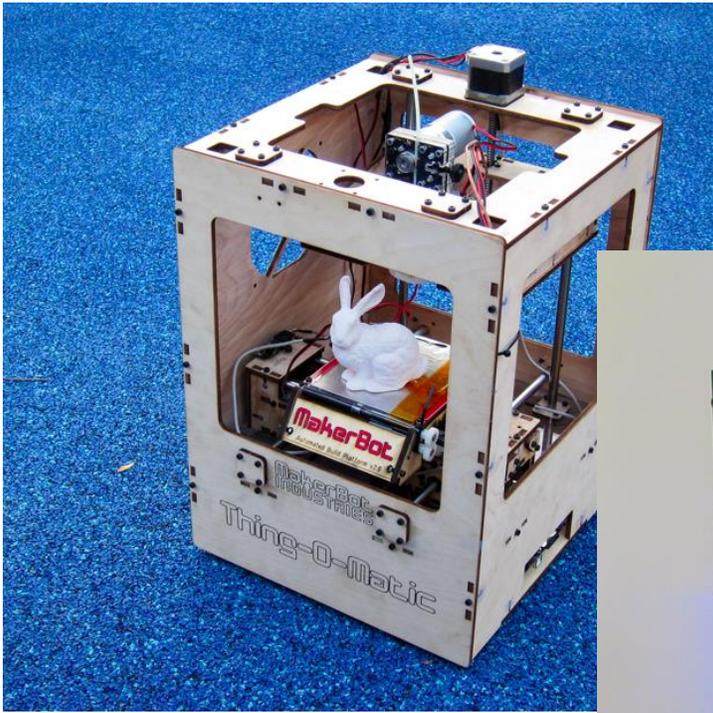

Zebra Imaging Holographic Motion Display

Ephemeral?

FogScreen

3. Digital fabrication

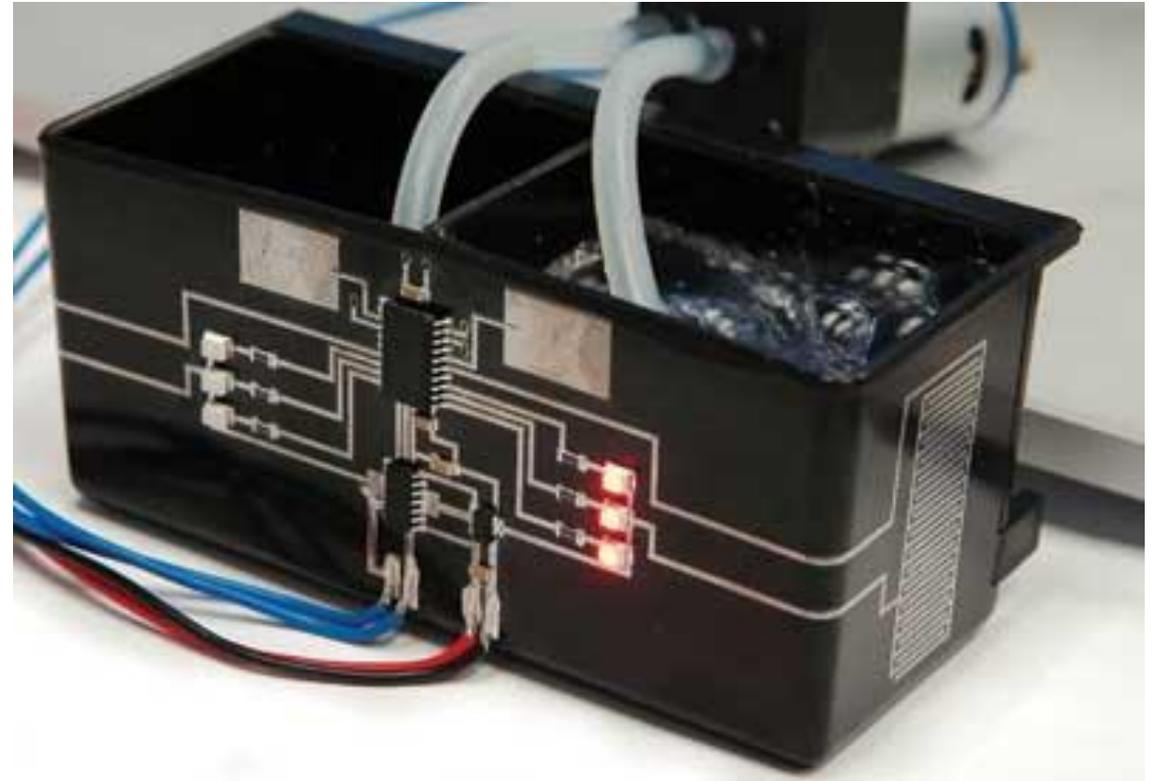

3D printed models

Solidoodle 2 (<\$500 printer)
(Photo courtesy of gizmag.com)

3D printed electronic circuits

Optomec (>\$250,000 printer)
(Photo courtesy of Neotech Services)

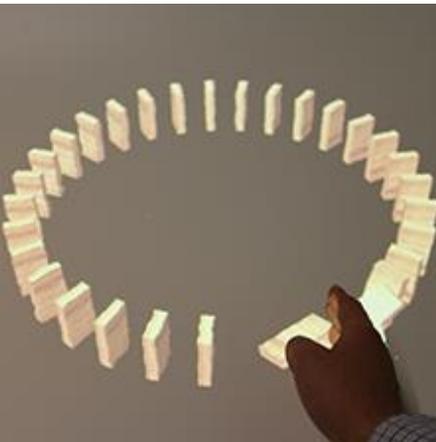

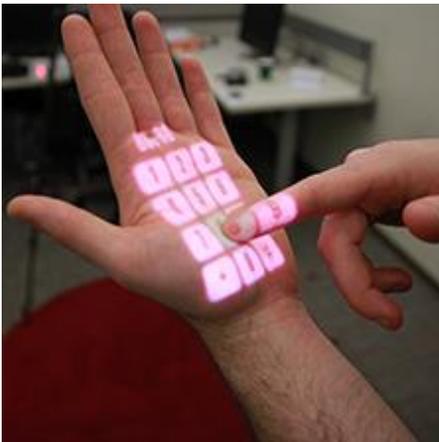

Three trends

1. Interaction needs (not computational needs) defines the form of the computational device
2. Displays are becoming more diverse
3. Digital fabrication

Soon, we will be able to transform any surface of any object into an interactive display.

We already can!

Enabling interactivity on every surface

Sphere

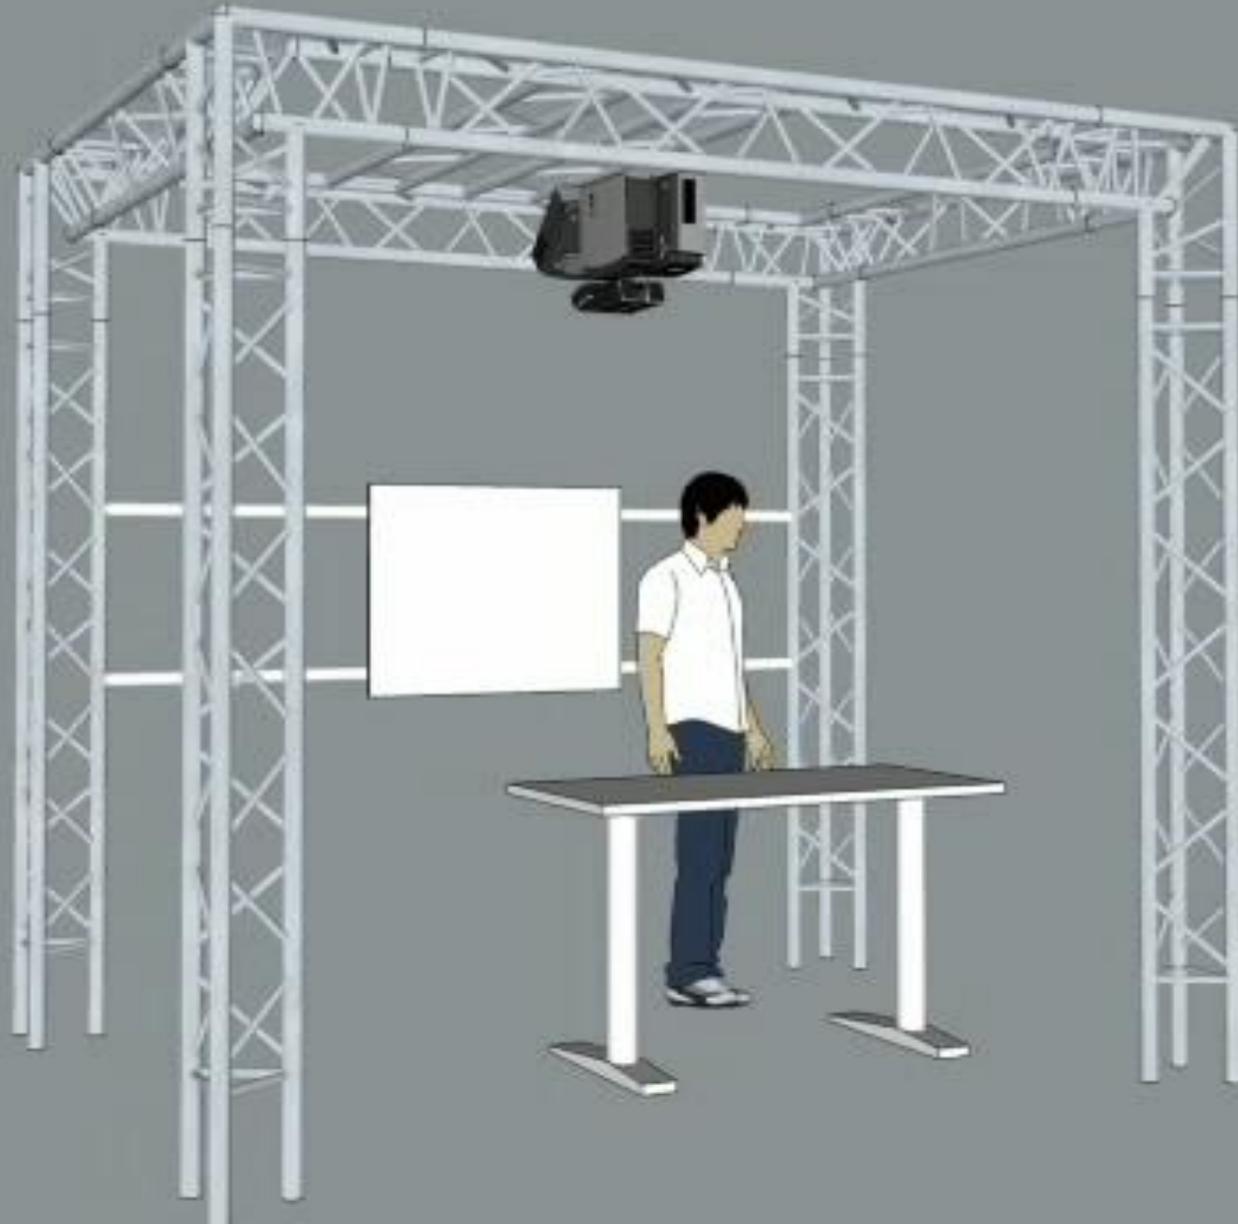

Pinch-the-Sky Dome

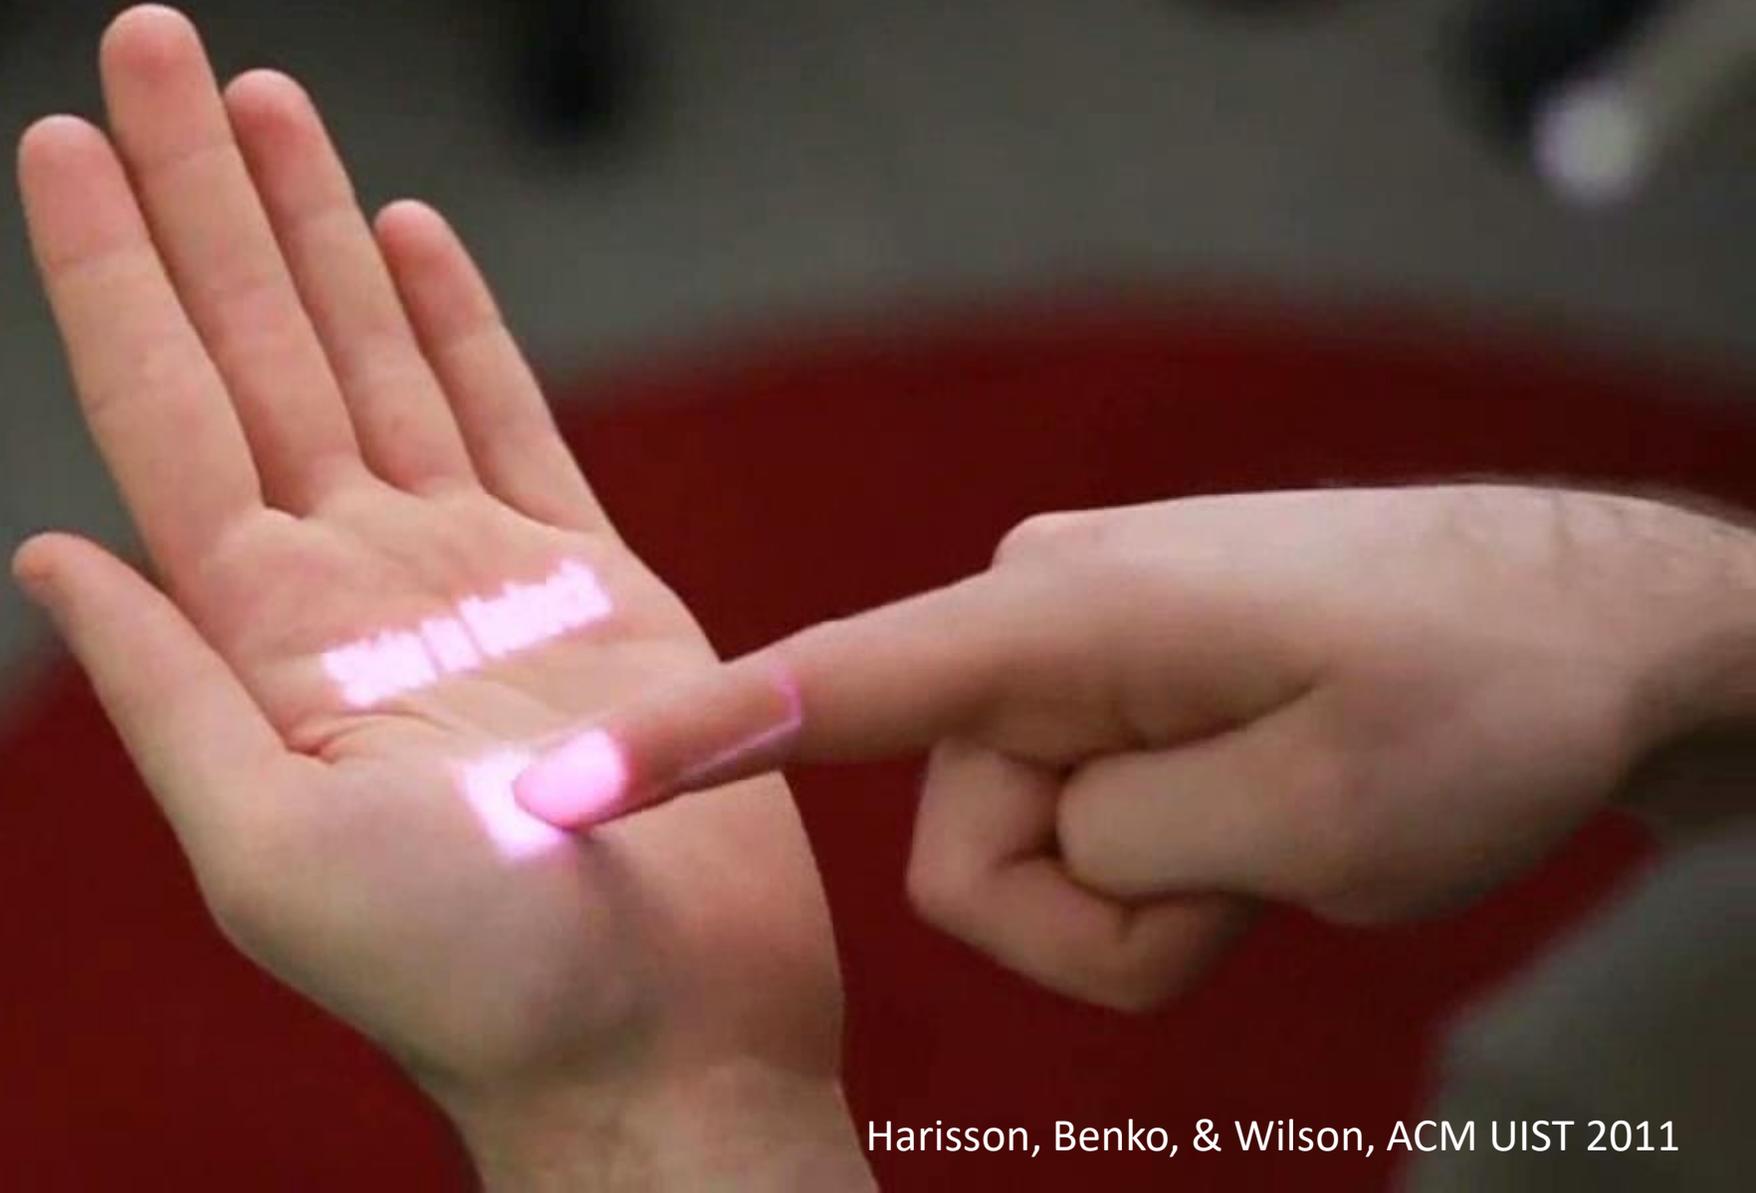

LightSpace

Wearable MultiTouch Projector (OmniTouch)

MirageTable

Beamatron

Depth Camera

Projector

Enable interactivity on **any available surface**
and **between surfaces.**

Thanks to my collaborators

Andy Wilson (MSR)

Chris Harrison (CMU)

Ricardo Jota (U. Toronto)

Ravin Balakrishnan (U. Toronto)

Shahram Izadi (MSR Cambridge)

Otmar Hilliges (ETH Zurich)

Brett Jones (UIUC)

Eyal Ofek (MSR XCG)

Call for papers: IEEE CG&A **Interacting Beyond the Screen**

The special issue of IEEE Computer Graphics & Applications

CFP:

<http://www.computer.org/portal/web/computingnow/cgacfp3>

Dates:

- Submission Date: September 7, 2013
- Publication Issue: May/June 2014

Suggested topics of interest include, but are not limited to:

- display, rendering, sensing technologies and frameworks that enable interaction beyond the screen
- projection and haptic augmentation of surfaces
- spatial and augmented reality
- computational illumination
- interactive 3D displays
- above the surface interaction
- imbuing everyday physical objects with interactivity and display capability
- depth camera-based interactions
- head-mounted and near-to-eye displays
- on-body interaction and display
- natural user interface interaction design and evaluation
- applications utilizing interactions and display beyond the screen

Come see the latest installment in our research...

IllumiRoom talk on Tuesday at 9am @ room **BLUE**.
