REPORT OF THE INDEPENDENT ACCOUNTANT

To the Management of Microsoft Public Key Infrastructure ("PKI") Services:

We have examined Microsoft PKI Services' management assertion that for its Certification Authority ("CA") operations in the United States of America and the European Union, throughout the period January 1, 2020 to April 30, 2020 for the CAs enumerated in Attachment B in scope for SSL Baseline Requirements and Network Security Requirements, Microsoft PKI Services has:

- disclosed its SSL certificate lifecycle management business practices in the applicable versions of its Microsoft PKI Services Certificate Policy and Certification Practice Statement enumerated in Attachment A, including its commitment to provide SSL certificates in conformity with the CA/Browser Forum Requirements in its repository, and provided such services in accordance with its disclosed practices

- maintained effective controls to provide reasonable assurance that:
    o the integrity of keys and SSL certificates it manages is established and protected throughout their lifecycles; and
    o SSL subscriber information is properly authenticated

- maintained effective controls to provide reasonable assurance that:
    o logical and physical access to CA systems and data is restricted to authorized individuals;
    o the continuity of key and certificate management operations is maintained; and
    o CA systems development, maintenance, and operations are properly authorized and performed to maintain CA systems integrity

- maintained effective controls to provide reasonable assurance that it meets the Network and Certificate System Security Requirements as set forth by the CA/Browser Forum

based on the WebTrust Principles and Criteria for Certification Authorities – SSL Baseline with Network Security v2.4.1. Microsoft PKI Services' management is responsible for its assertion. Our responsibility is to express an opinion on management's assertion based on our examination.

The relative effectiveness and significance of specific controls at Microsoft PKI Services and their effect on assessments of control risk for subscribers and relying parties are dependent on their interaction with the controls and other factors present at individual subscriber and relying party locations. Our examination did not extend to controls at individual subscriber and relying party locations and we have not evaluated the effectiveness of such controls.

Our examination was conducted in accordance with attestation standards established by the American Institute of Certified Public Accountants. Those standards require that we plan and perform the examination to obtain reasonable assurance about whether management's assertion is fairly stated, in all material respects. An examination involves performing procedures to obtain evidence about management's assertion. The nature, timing, and extent of the procedures selected depend on our judgment, including an assessment of the risks of material misstatement of management's assertion, whether due to fraud or error. We believe that the evidence we obtained is sufficient and appropriate to provide a reasonable basis for our opinion.

Because of the nature and inherent limitations of controls, Microsoft PKI Services' ability to meet the aforementioned criteria may be affected. For example, controls may not prevent, or detect and correct, error, fraud, unauthorized access to systems and information, or failure to comply with internal and external policies or requirements. Also, the projection of any conclusions based on our findings to future periods is subject to the risk that changes may alter the validity of such conclusions.

In our opinion, management's assertion, as referred to above, is fairly stated in all material respects.

Without modifying our opinion, we noted the following matter during our procedures:

Matter Topic		Matter Description
1.	Certificate Content	Microsoft PKI Services disclosed in Bugzilla #1644936 that it issued eight organization validated SSL certificates to the same subscriber. The certificates did not include the subject:localityName or the subject:stateOrProvinceName. The information was properly validated during the validation process, but was not included in the certificate.

This report does not include any representation as to the quality of the services of Microsoft PKI Services other than its CAs enumerated in Attachment B, nor the suitability of the services of any of Microsoft PKI Services for any customer's intended purpose.

Microsoft PKI Services' use of the WebTrust for Certification Authorities – SSL Baseline with Network Security Seal constitutes a symbolic representation of the contents of this report and it is not intended, nor should it be construed, to update this report or provide any additional assurance.

The World Health Organization classified the COVID-19 outbreak as a pandemic in March 2020. Based on the rapid increase in exposure globally, the gravity or length of the impact of the COVID-19 outbreak cannot be estimated at this time.

MICROSOFT PUBLIC KEY INFRASTRUCTURE SERVICES' MANAGEMENT ASSERTION

Microsoft Public Key Infrastructure ("PKI") Services operates the Certification Authority ("CA") services for the CAs enumerated in Attachment B in scope for SSL Baseline Requirements and Network Security Requirements and provides SSL CA services.

Microsoft PKI Services management has assessed its disclosures of its certificate practices and controls over its SSL CA services. Based on that assessment, in providing its SSL CA services in the United States of America and the European Union, throughout the period January 1, 2020 to April 30, 2020, Microsoft PKI Services has:

- disclosed its SSL certificate lifecycle management business practices in applicable versions of its Microsoft PKI Services Certificate Policy and Certification Practice Statement enumerated in Attachment A, including its commitment to provide SSL certificates in conformity with the CA/Browser Forum Requirements on the Microsoft PKI Services repository, and provided such services in accordance with its disclosed practices

- maintained effective controls to provide reasonable assurance that:
    - the integrity of keys and SSL certificates it manages is established and protected throughout their lifecycles; and
    - SSL subscriber information is properly authenticated

- maintained effective controls to provide reasonable assurance that:
    - logical and physical access to CA systems and data is restricted to authorized individuals;
    - the continuity of key and certificate management operations is maintained; and
    - CA systems development, maintenance, and operations are properly authorized and performed to maintain CA systems integrity

- maintained effective controls to provide reasonable assurance that it meets the Network and Certificate System Security Requirements as set forth by the CA/Browser Forum

based on the WebTrust Principles and Criteria for Certification Authorities – SSL Baseline with Network Security v2.4.1.
